What feature of Wireshark allows the analysis of one HTTP conversation?

- A. Setting a display filter to 'tcp'
- B. Follow TCP Stream
- C. Conversation list > IPV4
- D. Follow UDP Stream

Answer: B

Explanation:

Explanation/Reference:

Explanation: Follow TCP Stream is a feature of Wireshark that allows the analysis of a single TCP conversation between two hosts over multiple packets. Filtering packets using tcp in the filter box will return all TCP packets, not grouping by a single TCP conversation. HTTP is TCP not UDP, so you cannot follow a HTTP stream over UDP.

NEW QUESTION: 2

What is a characteristic of an active/passive storage array configuration?

- A. Read and write I/Os are performed only through the controller that manages the LUN
- B. Passive array is used for backup; active array is used for production data
- C. Host can perform I/Os to its LUNs through any of the available controllers
- D. Read and write I/Os are performed only through active cache

Answer: A

Explanation:

Midrange Storage Systems

Midrange storage systems are also referred to as active-passive arrays and are best suited for small- and medium-sized enterprise applications. They also provide optimal storage solutions at a lower cost. In an active-passive array, a host can perform I/Os to a LUN only through the controller that owns the LUN. The host can perform reads or writes to the LUN only through the path to controller A because controller A is the owner of that LUN. The path to controller B remains passive and no I/O activity is performed through this path.

Midrange storage systems are typically designed with two controllers, each of which contains host interfaces, cache, RAID controllers, and interface to disk drives.

Midrange arrays are designed to meet the requirements of small and medium enterprise application; therefore, they host less storage capacity and cache than high-end storage arrays. There are also fewer front-end ports for connection to hosts.

However, they ensure high redundancy and high performance for applications with predictable workloads. They also support array-based local and remote replication.
