Answer: A
Explanation:
Explanation
http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/using-network-security.html#default- security-group A default security group is named default, and it has an ID assigned by AWS. The following are the initial settings for each default security group:
Allow inbound traffic only from other instances associated with the default security group Allow all outbound traffic from the instance The default security group specifies itself as a source security group in its inbound rules. This is what allows instances associated with the default security group to communicate with other instances associated with the default security group.
