Answer: B,C

NEW QUESTION: 2

Which of the following agencies is responsible for funding the development of many technologies such as computer networking, as well as NLS?

- A. DIAP
- B. DARPA
- C. DTIC
- D. DISA

Answer: B

Explanation:

Explanation/Reference:

Explanation: The Defense Advanced Research Projects Agency (DARPA) is an agency of the United States Department of Defense responsible for the development of new technology for use by the military.

DARPA has been responsible for funding the development of many technologies which have had a major effect on the world, including computer networking, as well as NLS, which was both the first hypertext system, and an important precursor to the contemporary ubiquitous graphical user interface. DARPA supplies technological options for the entire Department, and is designed to be the "technological engine" for transforming DoD. AnswerD is incorrect. The Defense Information Systems Agency is a United States Department of Defense combat support agency with the goal of providing real-time information technology (IT) and communications support to the President, Vice President, Secretary of Defense, the military Services, and the Combatant Commands. DISA, a Combat Support Agency, engineers and provides command and control capabilities and enterprise infrastructure to continuously operate and assure a global net-centric enterprise in direct support to joint warfighters, National level leaders, and other mission and coalition partners across the full spectrum of operations.

Answer: B is incorrect. The Defense Technical Information Center (DTIC) is a repository of scientific and technical documents for the United States Department of Defense. DTIC serves the DoD community as the largest central resource for DoD and government-funded scientific, technical, engineering, and business related information available today.

DTIC's documents are available to DoD personnel and defense contractors, with unclassified documents also available to the public. DTIC's aim is to serve a vital link in the transfer of information among DoD personnel, DoD contractors, and potential contractors and other U.S. Government agency personnel and their contractors. AnswerA is incorrect. The Defense-wide Information Assurance Program (DIAP) protects and supports DoD information, information systems, and information networks, which is important to the Department and the armed forces

throughout the day-to-day operations, and in the time of crisis.

The DIAP uses the OSD method to plan, observe, organize, and incorporate IA activities. The role of DIAP is to act as a facilitator for program execution by the combatant commanders, Military Services, and Defense Agencies. The DIAP staff combines functional and programmatic skills for a comprehensive Defense-wide approach to IA. The DIAP's main objective is to ensure that the DoD's vital information resources are secured and protected by incorporating IA activities to get a secure net-centric GIG operation enablement and information supremacy by applying a Defense-in-Depth methodology that integrates the capabilities of people, operations, and technology to establish a multi-layer, multidimensional protection.

NEW QUESTION: 3

What are three common core directories for almost all Linux distributions? (Choose three.)

- A. /top
- B. /bin
- C. /user
- D. /etc
- E. /usr
- F. /bob

Answer: B,D,E
