NEW QUESTION: 4
What are the three primary components of NetFlow? (Choose three.)
A. Flow caching
B. Multicast
C. Cisco Express Forwarding
D. The data analyzer
E. A flow collector
F. Flow sequence numbers

Answer: A,D,E
Explanation:
NetFlow includes three key components that perform the following capabilities:
Flow caching analyzes and collects IP data flows entering router or switch interfaces and prepares data for export. It enables the accumulation of data on flows with unique characteristics, such as IP addresses, application, and CoS. FlowCollector and Data Analysis captures exported data from multiple routers and filters and aggregates the data according to customer policies, and then stores this summarized or aggregated data. Users can leverage Cisco NetFlow collector as a flow collector, or they can opt for a variety of third-party partner products. A Graphical user interface displays and analyzes NetFlow data collected from FlowCollector files. This allows users to complete near-real-time visualization or trending analysis of recorded and aggregated flow data. Users can specify the router and aggregation scheme and desired time interval.
