NEW QUESTION: 4
What can cause the state table of a stateful firewall to
update? (choose two)
A. When packet is evaluated against the outbound access list
and is denied
B. When a connection's timer has expired within state table
C. When outbound packets forwarded to outbound interface
D. When rate-limiting is applied
E. When a connection is created
Answer: B,E
Explanation:
Explanation
Stateful inspection monitors incoming and outgoing packets over
time, as well as the state of the connection,
and stores the data in dynamic state tables. This cumulative
data is evaluated, so that filtering decisions would
not only be based on administrator-defined rules, but also on
context that has been built by previous
connections as well as previous packets belonging to the same
connection.
Entries are created only for TCP connections or UDP streams
that satisfy a defined security policy.

In order to prevent the state table from filling up, sessions will time out if no traffic has passed for a certain period. These stale connections are removed from the state table.
