NEW QUESTION: 1

It is NOT important to read and understand your agency's Notice of Privacy Practices.

A. False

B. True

Answer: A

NEW QUESTION: 2

You configure a data loss prevention (DLP) policy named DLP1 as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Using a retention label in a policy is only supported for items in SharePoint Online and OneDrive for Business.

NEW QUESTION: 3

You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the Hyper-V server role installed. Server1 has 8 GB of RAM.

Server1 hosts five virtual machines that run Windows Server 2012 R2.

The settings of a virtual machine named Server3 are configured as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that when Server1 restarts, Server3 automatically resumes without intervention. The solution must prevent data loss.

Which settings should you modify?

- A. BIOS
- B. Automatic Stop Action
- C. Integration Services
- D. Automatic Start Action

Answer: B

Explanation:

Explanation/Reference:

Explanation:

The Automatic Stop Action setting should be modified because it will allow you to configure:

"Save the virtual machine state" option instructs Hyper-V Virtual Machine Management Service to save the virtual machine state on the local disk when the Hyper-V Server shuts down.

OR "Turn Off the virtual machine" is used by the Hyper-V Management Service (VMMS.exe) to gracefully turn off the virtual machine.

OR "Shut down the guest operating system" is successful only if the "Hyper-V Shutdown" guest service is running in the virtual machine. The guest service is required to be running in the virtual machine as the Hyper-V VMMS.EXE process will trigger Windows Exit message which is received by the service. Once the message is received by the guest service, it takes the necessary actions to shut down the virtual machine.

NEW QUESTION: 4

You are designing an authentication strategy for a new server that has SQL Server 2014 installed. The strategy must meet the following business requirements:

- * The account used to generate reports must be allowed to make a connection during certain hours only.

- * Failed authentication requests must be logged.

You need to recommend a technology that meets each business requirement. The solution must minimize the amount of events that are logged.

Which technologies should you recommend? To answer, drag the appropriate solution to the correct business requirement in the answer area.

Answer:

Explanation:

Explanation

1. Logon triggers fire stored procedures in response to a LOGON event. This event is raised when a user session is established with an instance of SQL Server. Logon triggers fire after the authentication phase of logging in finishes, but before the user session is actually established.

You can use logon triggers to audit and control server sessions, such as by tracking login activity, restricting logins to SQL Server, or limiting the number of sessions for a specific login.

2. Login auditing can be configured to write to the error log on the following events.

- Failed logins
- Successful logins
- Both failed and successful logins
