Answer:
Explanation:

Explanation:
In decision trees, the depth of the tree determines the
variance. A complicated decision tree (e.g. deep) has low bias
and high variance.
Note: In statistics and machine learning, the bias-variance
tradeoff is the property of a set of predictive models whereby
models with a lower bias in parameter estimation have a higher
variance of the parameter estimates across samples, and vice
versa. Increasing the bias will decrease the variance.
Increasing the variance will decrease the bias.
