NEW QUESTION: 3
For which feature is the address family "rtfilter" used?
A. Enhanced Route Refresh
B. MPLS VPN filtering
C. Unified MPLS
D. Route Target Constraint
Answer: D

Explanation:
Explanation/Reference:
Explanation:
With Multiprotocol Label Switching (MPLS) VPN, the internal Border Gateway Protocol (iBGP) peer or Route Reflector (RR) sends all VPN4 and/or VPN6 prefixes to the PE routers. The PE router drops the VPN4/6 prefixes for which there is no importing VPN routing and forwarding (VRF). This is a behavior where the RR sends VPN4/6 prefixes to the PE router, which it does not need. This is a waste of processing power on the RR and the PE and a waste of bandwidth. With Route Target Constraint (RTC), the RR sends only wanted VPN4/6 prefixes to the PE.
'
Wanted' means that the PE has VRF importing the specific prefixes.
RFC 4684 specifies Route Target Constraint (RTC). The support is through a new address family rtfilter for both VPNv4 and VPNv6.
