NEW QUESTION: 1

Scenario: A customer who installed all applications locally on managed laptops and desktops is willing to evaluate other application delivery methods as part of a new design created by a Citrix Architect. The environment will be standardized on Windows 10 and Windows Server 2016 for the Virtual Delivery Agent (VDA) machines.

As part of an application analysis performed earlier in the project, the information shown in the exhibit was collected regarding 1 of the required applications.

Click the Exhibit button to view the information.

Additionally, the customer has 3 objectives:

Minimize the amount of additional infrastructure components.
Utilize thin clients as endpoints in order to reduce costs.
Prohibit direct user access to the thin client operating system.

How should the architect install the application?

- A. Install it directly on a VDA machine image and access it through 2 virtual desktop session.
- B. Install it on an Application Layer using Citrix App Layering and include it in a layered image, and access it through a virtual desktop session.
- C. Install it directly on endpoint devices, and include it in a virtual desktop session using the Local App Access feature.
